Office 365

THE OFFICE YOU KNOW

Whether you're working in your office or on the go, you get a familiar, top-of-the-line set of productivity tools.

Communication tools from email and IM to social networking and business conferencing allow you to connect better with customers and colleagues.

With multi-party HD video, content sharing, shared calendars and team chat, Office 365 ensures you will always be in sync with your team.

Office 365 gives you control over your data security and compliance with privacy, transparency, and refined user controls built in.

Cloudfinder

Cloudfinder

The seamless solution for all your organization's cloud backup needs from one user interface.

- Safe, automated backups. Your data is never deleted and is always protected against user errors and attacks.
- Download or restore previous versions of your content within a few seconds.
- At any time you can search all user accounts and retrieve any content.

Bitdefender

Anti-malware software that protects your data from cyber-threats.

- Multi-stage detection
- Uses adaptive-layered architecture that includes endpoint controls, prevention, detection, remediation and visibility

TeamFusion

On-demand training that helps each employee embrace and adopt technology changes in the enterprise.

- Interactive training personalized for each user
- A network for peer-to-peer collaboration
- Guided learning paths, quizzes and surveys
- Usage reports with actionable insights on how users are adapting to change and where they need additional help

Meet Your Goals with Microsoft Core

DO NOT DISTRIBUTE

DRIVE GROWTH

Overcome your existing email system's limitations. Microsoft Core offers an increased mailbox and attachment size limit and also branded email addresses to build name recognition.

IMPROVE COLLABORATION AND COMMUNICATION

Strategic teamwork can suffer when you're lacking the right communication tools and support. On top of 24/7/365 end-user and admin support, Microsoft Core delivers the right set of tools - email, IM, social networking, video conferencing, and more - and collaborative features that allow you to create, share and edit documents in real time anytime and anywhere.

KEEP BUSINESS DATA SECURE AND REMAIN COMPLIANT

Unreliable and unsecure email, downtime and data loss, and a limited IT staff create a burden that distracts you from more strategic activities. With Office 365, IT is easier. You'll have business-class email, premium up-to-date malware and virus protection, continuous data backup, additional cloud-to-cloud encrypted backup and end-point protection, automatic updates, and powerful admin security controls.

REDUCE COSTS

Server upgrades or replacements present a high, upfront capital expense. With Microsoft Core there is no upfront investment. Instead, your costs are based on a predictable, monthly, per user subscription structure.

INCREASE PRODUCTIVITY

When working with a new productivity platform, you can run into issues with compatibility, integration, functionality, ease of use, and a learning curve that slows adoption of the new technology. Microsoft Core ensures maximum productivity through secure mobile capabilities, on-demand and forward-thinking training resources, and 24/7/365 support for admins and end-users.

The By AppSmart Advantage

WITH BY APPSMART, YOUR ORGANIZATION GETS THE MOST OUT OF YOUR CLOUD APPLICATIONS.

Greater ROI through increased usage enabled by our dedicated team of Cloud Success Specialists.

All-inclusive premium support the way you want it. Call, chat, email, or schedule a time.

Truly unlimited support for end-users and admins.

On-demand operational guidance ensures your team has the resources they need to leverage each application to achieve optimal productivity and efficiency.

Cloud Management Suite included.

Data Management

- Easily create and configure dashboards to get the most out of your data across all your cloud services. Even bring in data from external databases.
- Search for content across all your cloud services.
- Interoperability across all your applications to break down information silos.

Identity & Access Management

- Users experience the power of cloud services in one secure location.
- Powerful administrative control over enterprise cloud consumption while offering your team members the most secure and convenient cloud experience available.
- Tools include: single sign-on, multi-factor authentication, directory integration, user management, thousands of pre-integrated applications, and much more to drive organization productivity and security.

Infrastructure Management

- Automate the deployment and lifecycle management of your in-house cloud solutions.
- Leading automation engine for provisioning and managing IaaS resources and applications through the production lifecycle.
- Tools include: single-click version upgrades, resource scaling, a browser-based terminal window, status logs, and much more.

Case Study: Participant Media

“AppSmart helped us go beyond email migration. They helped architect our network and our active directory, which in turn helped us increase our security.”

— Rich Santos

DIRECTOR OF IT, PARTICIPANT MEDIA

Before migrating their email and Active Directory, Participant Media faced numerous security concerns and problems with user experience. After working with AppSmart, Participant Media enjoys greater data security in email and other apps, better employee collaboration through Office 365 tools and a network designed to fit their needs as a media company.
