

Internet Over Fiber

Speed up your internet!

What is Internet Over Fiber?

Internet over Fiber allows for a High Speed Internet connection where the signal is transmitted across fiber-optic cables. The signal is transmitted literally at the speed of light, so it is much faster than dial-up, DSL, and even most broadband connections, and there is no reduction in speed of transmission regardless of how great of distance there is between the location where the signal originates and the location of where it is received, or even if multiple users and devices access the internet at the same time and location.

Available in the following states
CA, PA, MA, TX, MD, DC, VA, CT, RI, DE, NY, NJ, FL
